Liquid Manure Cleanup Equipment and Supplies (Local Vendors for Cleanup Assistance)				
• Manure Pumper				
• Earth Moving Equipment				
• Tiling Equipment				
• Containment/Absorption Materials (Hay, Straw, Cornstalks, Sawdust)				
•				
Solid Manure Cleanup Equipment and Supplies (Local Vendors for Cleanup Assistance)				
• Manure Loading Equipment				
•				
Animal relocation site or plan (in case of barn damaged due to fire or storm)				
Alternative manure storage location or plan (in case of storage structure damage or flooding)				

Liquid Manure Emergency Response

1. Immediately stop the source of the leak or spill
 - Turn off pumps or valves
 - Clamp hoses or park tractor on hoses
2. Contain the spilled manure:
 - Use skid loader or tractor with blade to make berms
 - Install bale checks and block downstream culverts
 - Insert sleeves around tile intakes (or plug/cap)
 - Use tillage equipment to work ground ahead of spill
 - Use absorptive material
3. Make necessary phone calls as listed in the chart above:
 - Notify MN Duty Officer at 1-800-422-0798
 - Notify sheriff's office if spilled on public roads or right-of-ways for traffic control (507-931-1570)
4. Cleanup:
 - Clean up spill immediately from road and roadside
 - Clean up all material, including the contaminated soil, as soon as possible by pumping, scraping, or other means
 - Leave vegetation if possible
 - Land apply manure at agronomic rates or place manure back in the manure storage area
 - Follow recommendations of County Feedlot Officer or MPCA staff
 - Restore site to its original conditions
5. Document your actions:
 - Keep records of all actions related to the spill and follow up activities

Solid Manure Emergency Response

1. Make necessary phone calls as listed in the chart above:
 - Notify MN Duty Officer at 1-800-422-0798
 - Notify sheriff's office if spilled on public roads or right-of-ways for traffic control (507-931-1570)
2. Cleanup*
 - Clean up spill immediately from road and roadside
 - Clean up all material, including the contaminated soil, as soon as possible by scraping, or by other means
 - Leave vegetation if possible
 - Land apply manure at agronomic rates or place manure back in the solid manure storage area/stockpile
 - Follow recommendations of the County Feedlot Officer or MPCA staff
 - Restore site to its original conditions
3. Document your actions
 - Keep records of all actions related to the spill and follow up activities

**If rain is expected prior to cleanup; actions need to be taken to contain manure contaminated runoff from discharging
(See #2 under Liquid Manure Emergency Response)*
